

Refuelling of boats on moorings

Dated	01.07.2014
Review Date	01.07.2015

Hazard

Spillage of fuel

Action to minimise risk

Transport the fuel in 5 litre fuel containers.

Dispense fuel directly into the boats fuel tank using an appropriate spout

Larger quantities should be transferred from the container to the boats fuel tank using a syphon

An antisplash funnel to be used as necessary

Absorbent cloths to be used around the filler opening to soak up any splashes / spillage and clean up spouts or syphon gear after use

Contaminated cloths to be disposed of off site in an appropriate manner
